Professional Summary

Computer Engineer specializing in Software Engineering, passionate about software development, modern architectures, and emerging technologies. Experienced in designing and developing **full-stack applications** using technologies such as **React.js**, **NestJS**, **REST APIs**, **Prisma**, and **PostgreSQL**. Familiar with the entire software development lifecycle, from system design to containerization and deployment, using **Docker**, **Nginx**, **Jenkins**, and **CI/CD** practices. A proactive, adaptable, and solution-oriented engineer with the ability to learn new technologies and work effectively in Agile/Scrum environments.

Professional Experience

Software Development Engineer – Final-Year Project — MAXIM

Tunisia — *2026*

- Designed and developed **Inventiq**, a full-stack web-based inventory management platform built on a **modular monolithic architecture** with a decoupled **single-page application (SPA)** frontend.
- Developed the frontend using **React.js** and the backend using **NestJS**, with the frontend consuming backend services through **REST APIs**.
- Deployed the application in a **serverless environment on Vercel**, using **PostgreSQL** for data storage and **Prisma ORM** for database management.
- Automated end-to-end testing with **Selenium** and implemented a **CI/CD pipeline** using **Jenkins**.

Key Contributions:

- **Process Centralization:** Digitized and centralized inventory management processes within a single web-based platform.
- **Maintainability and Scalability:** Structured the backend using a **modular monolithic architecture** and decoupled the **SPA frontend** to facilitate future enhancements and maintenance.
- **Quality Assurance:** Automated end-to-end tests with **Selenium** to strengthen functional validation and improve application reliability.
- **Delivery Automation:** Implemented a **CI/CD pipeline** with **Jenkins** and deployed the application on **Vercel** to streamline and improve deployment reliability.

Software Development Engineer — BUS Software

Sousse, Tunisia — *2025*

- Designed and developed **DineHub**, a full-stack restaurant management web application based on a client-server architecture.
- Developed the frontend using **React.js** and the backend using **NestJS**, including the design and integration of **REST APIs**.
- Containerized the frontend and backend using **Docker** and configured **Nginx** as a web server and reverse proxy.
- Automated the **CI/CD pipeline** using **GitHub Actions** to support application integration and deployment.

Key Contributions:

- **Process Optimization:** Digitized and automated restaurant management workflows through a centralized software solution.
- **Performance and Communication:** Implemented a **REST API**-based architecture and configured **Nginx** to manage communication between application components.
- **Deployment Automation:** Containerized application components with **Docker** and automated **CI/CD workflows** using GitHub Actions.

Education

EPI Digital School **Sousse, Tunisia**
Engineering Degree in Computer Engineering, Specialization in Software Engineering *Oct. 2023 – Jun. 2026*

ISET Sousse **Sousse, Tunisia**
Bachelor's Degree in Electrical Engineering, Specialization in Automation and Industrial Computing *Oct. 2020 – Jun. 2023*

Technical Skills

Frontend: React.js, JavaScript, HTML5, CSS3
Backend: NestJS, Node.js, Spring Boot, REST APIs
Databases: PostgreSQL, MongoDB, MySQL, Prisma ORM
DevOps & CI/CD: Docker, Nginx, Jenkins, GitHub Actions, Vercel
Testing: Selenium, pytest
Tools & Methodologies: Git, GitHub, Linux, Agile/Scrum, Kanban, Jira

Languages

- **Arabic:** Native **French:** B2 **English:** B2
